- Some useful library

### Database

- Microsoft Sql Server

### Front Technology

- HTML5
- CSS3/SCSS
- JS/JQuery
- Bootstrap

## Experience

2021 – 2022

Own project

### Alloggio hotel reservation system / Full stack

The project was prepared with MVC structure in .net core. The project, whose main purpose is to introduce the hotel to the customers, to accept future reservations and to establish a bond between the customer and the hotel management.

2022 – 2023

U&R Companies group

### TimeSheet

As a back end developer, I developed a personal cabinet application for client companies and their employees. The application is designed to work in 2 directions. As new requests are sent from within the application, it is possible to automatically enter existing data through 1c integration.

Features of the application:

1. .net core api infrastructure
2. authentication with jwt
3. confirmation via email (integration with sendgrid)
4. multi language (az/en/ru)
5. report any problems that occurred (integration with telegram)
6. manual login with fin/email or automatic via Active Directory username (windows authentication)
7. generate and download report as excel (with ClosedXML)
8. employee's monthly salary (deduction and earnings)
9. timesheet for daily tasks
10. personal and family information

11. vacation days/monthly attendance/decisions
12. daily activity, entry and exit hours and delays of employees for managers
13. determination of workers' shifts
14. sending requests for shift changes between employees
15. employees can apply online for business trip, vacation, permission and application
16. hierarchical forwarding of incoming applications to approvals
17. email notice for the person confirming request
